

USABILITY TESTING & ANALYSIS

TaskMate – Student Task Manager App

Project Overview

This project focuses on conducting usability testing on a mobile application prototype to evaluate user experience and identify usability issues. The testing was performed on the TaskMate app prototype created using Figma.

Objective

- Evaluate usability of the application
- Identify user difficulties
- Collect feedback for improvement
- Enhance overall user experience

Test Plan

Target Users: Students (Age 18–25)

Number of Participants: 2–3 users

Testing Method: Informal usability testing

Test Scenarios

Participants were asked to perform the following tasks:

1. Open the app and login
2. Navigate to dashboard
3. Add a new task
4. Save the task
5. View the updated task list

Observations

- Users were able to login easily

- Navigation between screens was smooth
- Some users hesitated while finding the (+) button
- Minor confusion in understanding labels

User Feedback

- Interface is simple and clean
- Easy to understand workflow
- Buttons should be more visible
- Labels can be clearer

Usability Analysis

Ease of Use: High

Navigation: Smooth

Learnability: Easy

Efficiency: Good

Improvements Suggested

- Increase size of (+) button
- Improve spacing between elements
- Use clearer labels
- Highlight important actions

Design Improvement

Based on usability testing:

- UI elements were resized
- Layout spacing improved
- Navigation clarity enhanced

Final Outcome

- Identified usability issues
- Improved user interface
- Enhanced user experience
- Gained knowledge in usability testing and analysis
